

Email Encryption

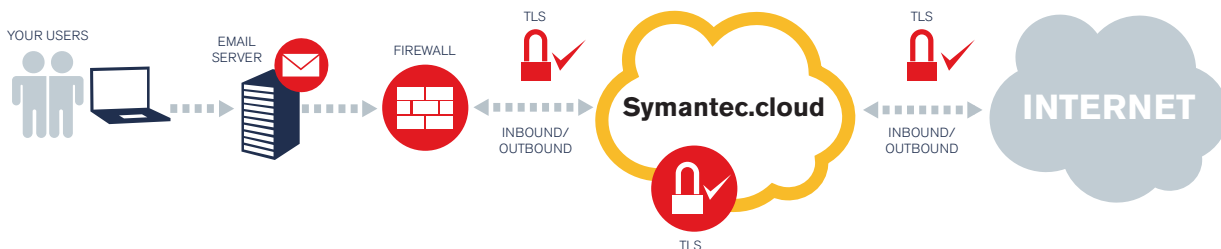

Securing the connection between you and your business partners

Secure your sensitive data with key business partners and minimise data breaches by encrypting your email. Powered by Symantec.cloud, Claranet SOHO email encryption service can secure your sensitive emails with selected customers, protecting your business and reputation.

Email Encryption overview

Email Encryption keeps your sensitive documents secure when emailing them to other customers or business partners, it creates a dedicated link between your business and a nominated recipient, ideal for sending financial documents or personal information.

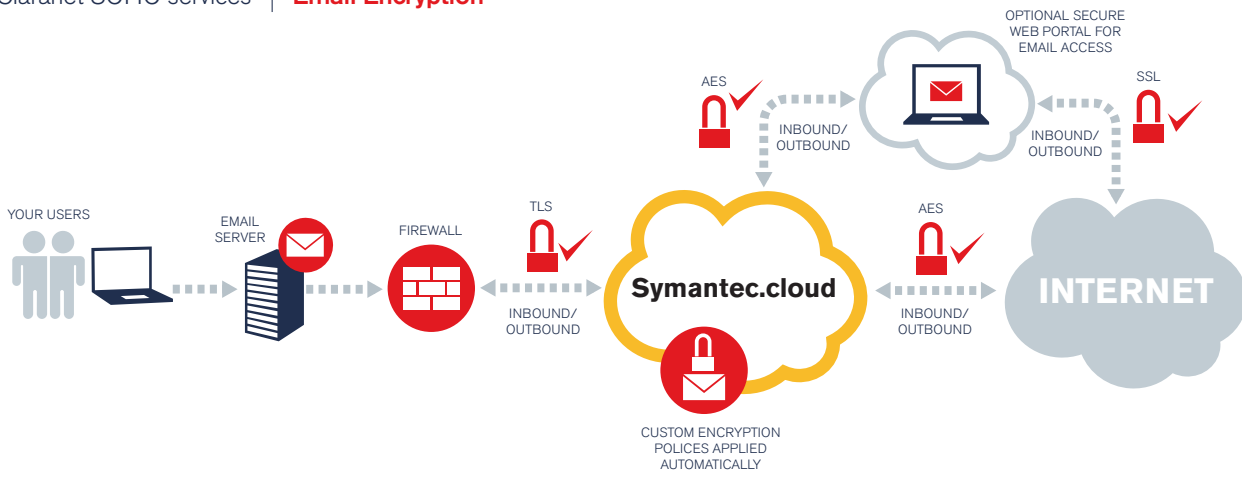

- Customisable and secure delivery options including web portals
- User friendly by securing automatically
- Uses Transport Layer Security (TLS) to encrypt the connection
- Simple administration

Email Policy Based Encryption overview

Email Policy Based Encryption helps your business to secure your emails in a more flexible manner. It allows you to set different policies for different departments in your business. Financial documents can have stricter policies, email encryption can help protect your business and your chosen business partner or customer.

- Management of digital certificates and encryption keys
- Integrates with Symantec.cloud security services
- Wide range of email delivery mechanisms
- Supports mobile platforms
